

What are human beings that you are mindful of them, mortals that you care for them? Yet you have made them a little lower than God and crowned them with glory and honour.

Psalm 8: 4-5

We cover everything from before the cradle to after the grave: from embryo research to organ donation and anything medical or health related in between.

We are launching a new 'UK Minority ethnic mental health toolkit' The toolkit helps to to raise awareness and to provide information for Church leaders, Church workers and Chaplains to assist them in gaining a better understanding of issues relevant to UKME mental health, a link to which is in the list below.

We contribute actively and positively to debates on a wide range of issues including:

- Assisted suicide
- Organ donation
- Human enhancement
- Abortion
- Mitochondrial Donation
- Embryo Research
- Minority Ethnic Mental Health
- NHS Chaplaincy
- NHS Reform
- Social Care Reform
- Genome-editing
- Human-animal research

Ongoing areas of investigation include:

- Living organ donation
- Artificial Intelligence and Robotics
- Public Health

These topics are complex and defy simple answers or solutions, but we believe that we can make a helpful contribution to society through our involvement.

These topics are complex and defy simple answers or solutions, but we believe that we can make a helpful contribution to society through our involvement.

Based on core Christian beliefs, we advocate four main principles for all areas of medical ethics and health and social care:

1. Affirming life
2. Caring for the vulnerable
3. Building a caring and cohesive society
4. Respecting Individuals

You can read further details of our approach to [medical ethics here](#).

There are no easy answers, but we believe that these principles help us to promote practices that are safe, that work, that are ethical and that are wise.
